

A world-class, scaled, natural gas operator

Caturus is a natural gas-focused exploration and production company producing over 600 million cubic feet of net gas equivalent per day across approximately 250,000 Tier 1 net acres in South Texas.

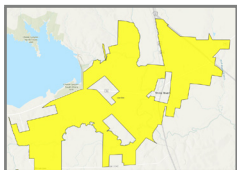

Company Overview

Proven ability to drill long laterals and deep, high-pressure wells in technically complex subsurface environments, particularly within the prolific Eagle Ford and Austin Chalk formations of Texas

Building a scaled natural gas development company positioned at the front end of the cost curve

Premium South Texas position with ~20 years of inventory at a two-rig continuous development pace

Strategic proximity to U.S. Gulf Coast positions Caturus' gas production to fuel growing LNG demand

Buildout of in-field gathering in addition to a strategic partnership with Kinder Morgan allows for optimal operational flexibility to service end markets

Industry-Leading Sustainability Strategy and Emissions Management Program

Focusing on emissions management through robust leak detection and repair program

Pursuing MiQ certification to validate that Caturus gas is produced responsibly with minimal methane intensity

Implementing consistent monthly tracking of environmental metrics and improving metrics methodology for sustainability disclosures

Leading-Edge Technology

Caturus signed a multi-year contract with Nabors Industries deploying the PACE-X Ultra™ X33 rig, the most powerful onshore drilling system currently in the continental United States.

The rig features a one-million-pound mast rating, racking capacity of up to 35,000 feet, and three 2,000-horsepower mud pumps capable of 10,000 psi mud pressure.

This technology furthers the Company's technical drilling capabilities in challenging environments and is expected to set new industry benchmarks for operational safety, efficiency, and environmental responsibility.

Caturus' upstream operations and Commonwealth LNG are combined within the Caturus platform founded by Kimmeridge with the goal of building America's leading independent integrated natural gas and LNG company delivering responsibly sourced, low-emission fuel to domestic and international markets.
